

Vibriosis Case Classification Flow Chart

December 2013 - based on CSTE 2012 Case Definition

Vibriosis (Non-cholera *Vibrio. spp.*)

- ¹ **Clinical Description:** An infection of variable severity characterized by watery diarrhea, primary septicemia, or wound infection. Asymptomatic infections may occur, and the organism may cause extra-intestinal infection.
- ² **Isolation:** *Vibrio cholerae* O1 and O139 are reportable as cholera, not vibriosis
- ³ **Confirmed/Probable Case:** Complete the Cholera and Other *Vibrio* Illness Surveillance (COVIS) Report and send to CDC as specified on the form.
